

# Nogies Creek Garlic Mustard Pull

To the many people who come to Nogies Creek to recreate, take in the surroundings, or call this place home: With usage comes responsibility, with active stewardship comes preservation, for the longterm enjoyment of this beautiful place!

**On Saturday May 13<sup>th</sup>  
from 12:30 – 3:30**

We invite you to join the ranks of being an environmental steward of Nogies Creek near Bobcaygeon Ontario. A few patches of garlic mustard are in the early infestation. Let's work together to remove it and preserve this beautiful creek in all it's natural splendor. Meeting on Bass Lake Road, specific location TBD. Supplies and light refreshments will be provided.

## Garlic Mustard – *Alliaria petiolata*

Is an aggressive invader of forest and riverside habitats. If left unchecked, it can quickly establish large populations that push beneficial native species out of the way. The first step is preventing its spread. But once it is there, the next step is active removal.
